An Act to increase current medical providers' knowledge about autism in order to improve the treatment individuals with autism receive in medical settings.

*Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:*

1           Notwithstanding any general or special law, rule, or regulation to the contrary, to expand  
2           current medical providers' knowledge about autism, the department of public health will design  
3           and provide specialized training on autism through medical continuing education programs for  
4           primary care physicians, neurologists, psychiatrists, dentists, emergency room personnel and  
5           other medical specialists. Once the training on autism is implemented, the department of public  
6           health will design a pilot program to ultimately develop one "autism team" who could be called  
7           upon should a patient with autism enter the emergency room, need tests or x-rays, or need to be  
8           admitted. Members of the "team" will have completed the specialized training on autism and will  
9           be knowledgeable about autism and communication difficulties many people with autism have  
10          and advise medical doctors and other staff how to communicate with the patient.
