

HOUSE No. 951

The Commonwealth of Massachusetts

PRESENTED BY:

Ronald Mariano

To the Honorable Senate and House of Representatives of the Commonwealth of Massachusetts in General Court assembled:

The undersigned legislators and/or citizens respectfully petition for the adoption of the accompanying bill:

An Act relative to insurance companies and quality measures.

PETITION OF:

NAME:	DISTRICT/ADDRESS:	DATE ADDED:
<i>Ronald Mariano</i>	<i>3rd Norfolk</i>	<i>1/17/2013</i>

HOUSE No. 951

By Mr. Mariano of Quincy, a petition (accompanied by bill, House, No. 951) of Ronald Mariano relative to the establishment of physician evaluation programs by insurance companies. Financial Services.

[SIMILAR MATTER FILED IN PREVIOUS SESSION
SEE HOUSE, NO. 302 OF 2011-2012.]

The Commonwealth of Massachusetts

In the Year Two Thousand Thirteen

An Act relative to insurance companies and quality measures.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

1 SECTION 1. As used in this section 2 of chapter 32A, the following words shall have the
2 following meanings:

3 "Quality" is the degree to which health services for individuals and populations increase
4 the likelihood of the desired health outcomes and are consistent with current professional
5 knowledge.

6 "Cost efficiency" is the degree to which health services are utilized to achieve a given
7 outcome or given level of quality.

8 "Physician performance evaluation" shall mean a system designed to measure the quality,
9 and cost efficiency of a physician's delivery of care and shall include quality improvement
10 programs, pay for performance programs, public reporting on physician performance or ratings'
11 and the use of tiering networks.

12 SECTION 2. Section 21 of Chapter 32 A of the General laws as appearing the 2010
13 Official Edition is hereby amended by adding after the last sentence, the following: The
14 commission shall not implement or contract with a carrier as defined in section 1 of Chapter
15 1760 for the implementation of a physician performance evaluation program as defined in
16 section one unless the program has the following minimum attributes:

17 Public disclosure regarding the methodologies, criteria and algorithms under
18 consideration, 180 days before any performance evaluations of physicians are applied.

19 Meaningful input by independent practicing physicians and biostatisticians in a timely
20 fashion that will ensure the measures being used are clinically important and understandable to
21 patients and physicians and the tools used for performance evaluations are fair and appropriate;

22 A mechanism to ensure data accuracy and validity that includes a feedback cycle of not
23 less than 120 days prior to the public reporting of the data, which accepts corrections to errors
24 from multiple sources, including the physician being evaluated, assesses the causes of the
25 error(s) and improves the overall evaluation system.

26 A mechanism to provide the physician being evaluated with patient level drill down
27 information on any cost efficiency measures used in the evaluation and patient lists for any
28 quality measures that are used in the evaluation that includes a list of patients counted towards
29 each quality measure, as well as the interventions for each patient that counted towards that
30 measure.

31 Each quality measure shall have a reasonable target set for each measure and shall not
32 allow the target level to be open-ended.

33 If a quality measure is to be constructed across multiple conditions then the measure shall
34 be case mix adjusted.

35 A consensus process shall be in place to provide proper weighting of more important
36 quality measures at a higher weight and the equal weighting of all measure shall not be used as a
37 default.

38 Sample sizes used in the development of quality measures should not be increased by
39 adding the number of interventions and number of opportunities across multiple health condition
40 to create an adherence ratio, without appropriate statistical adjustment of such a process.
41 Adherence must be assessed at a physician group practice level rather than at the individual
42 physician level.

43 Sample sizes used in the development of cost efficiency measures must be large enough
44 to provide valid information.

45 Information physicians are rated on must be current to reflect physicians' current
46 practices of care for their patients, be appropriately risk adjusted and include appropriate
47 attribution, definition of specialty and adjustments for unusual medical situations. Physicians
48 should be measured only on conditions appropriate to their specialties.

49 Use of preventive care and under-use measures should not be considered as part of cost
50 efficiency measurements.

51 Recommendations by which the physician can improve the results of the evaluation
52 reporting.

53 An evaluation plan that uses assignment by tiering shall include a uniform tier
54 assignment protocol and shall have a statistically significant difference in rating calculations in
55 order to shift a physician from one tier to another. Separate categories shall be created for
56 physicians for who cannot be evaluated in a statistically reliable manner. Said categorization
57 shall not result in higher co-payments for patients being treated by physicians in these separate
58 categories. Said plans shall also employ a data driven process to determine which medical
59 specialties to tier.

60 Uniform tiering should be assigned to group practices so as not to add additional
61 administrative burdens to physicians' practices.

62 Accuracy regarding tiering is critical to avoid the unintended consequences of limiting
63 access to care and introducing risk adversity. Information should be disseminated in such as
64 fashion that results are is both understandable and comprehensive enough to promote education
65 and quality improvement.

66 Increasing data accuracy must be approached as a continuous quality improvement (CQI)
67 project aimed at improving the evaluation system itself.

68 SECTION 3. No carrier as defined in Section 1 of Chapter 1760 of the general laws shall
69 establish a physician performance evaluation program unless the program has the following
70 minimum attributes:

71 Public disclosure regarding the methodologies, criteria and algorithms under
72 consideration, 180 days before any performance evaluations of physicians are applied.

73 Meaningful input by independent practicing physicians and biostatisticians in a timely
74 fashion that will ensure the measures being used are clinically important and understandable to
75 patients and physicians and the tools used for performance evaluations are fair and appropriate;

76 A mechanism to ensure data accuracy and validity that includes a feedback cycle of not
77 less than 120 days prior to the public reporting of the data, which accepts corrections to errors
78 from multiple sources, including the physician being evaluated, assesses the causes of the
79 error(s) and improve the overall evaluation system.

80 A mechanism to provide the physician being evaluated with patient level drill down
81 information on any efficiency measures used in the evaluation and patient lists for any quality
82 measures that are used in the evaluation.

83 Each quality measure shall have a reasonable target set for each measure and shall not
84 allow the target level to be open-ended.

85 If a quality measure is to be constructed across multiple conditions then the measure shall
86 be case mix adjusted.

87 A consensus process shall be in place to provide proper weighting of more important
88 quality measures at a higher weight and the equal weighting of all measure shall not be used as a
89 default.

90 Sample sizes used in the development of quality measures should not be increased by
91 adding the number of interventions and number or opportunities across multiple health condition
92 to create an adherence ratio. Adherence must be assessed at a physician group practice level
93 rather than at the individual physician level.

94 Recommendations by which the physician can improve the results of the evaluation
95 reporting.

96 An evaluation plan that uses assignment by tiering shall include a uniform tier
97 assignment protocol and shall have a statistically significant difference in rating calculations in
98 order to shift a physician from one tier to another. Separate categories shall be created for
99 physicians for who cannot be evaluated in a statistically reliable manner. Said categorization
100 shall not result in higher co-payments for patients being treated by physicians in these separate
101 categories. Said plans shall also employ a data driven process to determine which medical
102 specialties to tier.

103 Uniform tiering should be assigned to group practices so as not to add additional
104 administrative burdens to physicians' practices.

105 Accuracy regarding tiering is critical to avoid the unintended consequences of limiting
106 access to care and introducing risk adversity. Information should be disseminated in such as
107 fashion that results are is both understandable and comprehensive enough to promote education
108 and quality improvement.

109 Increasing data accuracy must be approached as a continuous quality improvement (CQI)
110 project aimed at improving the evaluation system itself.
