LETTER FROM THE EXECUTIVE DIRECTOR

As anticipated, TRC experienced a modest increase in national collections in 2021. While the COVID-19 pandemic continued, most businesses returned to some sense of normal, including TRC. Our outreach activities were able to be utilized to the full extent. The program continues to work in new and interesting ways to keep collecting mercury-containing thermostats and responsibly recycling every mercury thermostat collected every time. While 2021 collections were up 5% over 2020, it is important to remember that TRC collects and recycles a product that has not been sold in the marketplace since 2007; and as there is a decreasing number of mercury-containing thermostats in use, our collections will continue to decline.

In 2022, TRC will continue to target mercury thermostat collections and work with our partners in the HVAC industry, the waste sector, the energy sector and the regulatory community to achieve positive results. For a program such as TRC's to be successful year after year, we require support from our industry members, collection partners, marketers, allied industries, regulatory agencies and staff. These strategic partnerships allow TRC's effectiveness to grow as it continues to move forward successfully in the collection and proper disposal of mercury-containing thermostats.

We are happy to provide you with this year's annual report. Please do not hesitate to contact us with comments or questions.

2021 Collections and Evaluation

The following analytical report details the annual program performance for mercury thermostat collection in the state of Massachusetts in 2021. It is important to note that collections were most likely affected by the pandemic, whether it be fewer in-home replacements, a delay of dropping thermostats off for recycling or collection locations returning less recycling containers due to limited personnel. A few of the program highlights for 2021 are included below:

- In 2021 the program **collected 43.2 lbs. of mercury** in Massachusetts. Since 2000, the annual quantity of mercury collected in Massachusetts has been an average of 37.5 lbs.
- The program collected **5,585 whole thermostats in 2021**. This was an 8% decrease over the number of thermostats collected in 2020. Since 2000, the average thermostat count per year is 4,634.
- The average **number of whole thermostats collected per bin in 2021 was 66 thermostats**, an increase from 57 in 2020.
- The counties with the most bins and thermostats returned in 2021 were **Middlesex County (26 bins, 2,041 thermostats), Worcester County (20 bins, 1,234 thermostats), and Barnstable County (8 bins, 540 thermostats)**.
- In 2021, **27% of the partner locations returned at least one bin**.
- **A total of 142 'Miss You' calls were placed in 2021** and 25 site visits completed.
- In addition to 5,585 whole thermostats, **575 loose switches were collected, bringing the total number of "thermostat equivalents" returned in 2021 to 6,176**.

Section 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program. On average, the program has collected 37.5 lbs. of mercury and 4,634 whole thermostats per year since 2000. In 2021, the program collected 43.2 lbs. of mercury from 5,585 thermostats and 575 loose switches. Figure 1 displays the total number of bins, the total number of thermostats, and the quantity of mercury collected in Massachusetts since the beginning of the program.

Figure 2 displays the number of bins collected in Massachusetts since the initiation of the collection program, as well as the total number of bins collected in the U.S. over the same period. The number of bins collected in Massachusetts has generally increased from 2000 to 2018. In 2021, bin returns increased again, checking in with 125 bins.

The 43.2 lbs. of mercury collected in Massachusetts in 2021 reflected an 11% decrease when compared to the 48.8 lbs. collected in 2020. Figure 3 displays the quantity of mercury collected in Massachusetts over time as well as the annual percent change in Massachusetts and nationally.

Figure 6 displays the monthly distribution of bins and thermostats collected in Massachusetts in 2021.

Figure 7 shows the average number of thermostats per bin returned per month for the year.

Figure 8 displays the average number of thermostats returned per bin in Massachusetts and in the U.S. since the beginning of the Massachusetts program. Nationally, the number of thermostats per bin has been decreasing annually since 2000. In Massachusetts a different pattern is observed, with the average fluctuating throughout the years. The number of thermostats per bin in 2021 (66 thermostats per bin avg.) increased from 2020 (57 thermostats per bin avg.).

Figure 9 plots the total bins returned over time along with the average number of thermostats per bin over the same period. In general, the number of bins returned in Massachusetts increased from 2000 to 2018, with a rebound in 2021.

SECTION 2: Channel Partner Analysis

Section 2 of the report examines the partner locations in more detail. Most thermostats collected in Massachusetts were through contractors (47.6%) with the majority of the remaining thermostats collected by wholesalers (41.4%). Figure 10 shows the distribution of thermostats collected by location type in 2021.

Figure 10 - Thermostats Collected by Location Type in 2021

The number of bins returned in 2021 decreased from 2020 levels across contractors, but increased across the other audiences. Figure 11 displays the change in the number of bins returned by thermostat collection type over time in Massachusetts.

Figure 11 - Thermostat Bins Returned by Location Type over Time

In 2021, 27% of Massachusetts locations possessing a collection bin sent back at least one bin for recycling. The distribution is displayed in Figure 12.

Figure 13 displays the total bins and thermostats returned by county in 2021. An analysis of the top performing counties revealed that Middlesex County (26 bins, 2,041 thermostats), Worcester County (20 bins, 1,234 thermostats), and Barnstable County (8 bins, 540 thermostats) returned the greatest number of bins and thermostats in 2021.

TRC partner Wheelabrator (1,654 thermostats) returned the highest number of thermostats in Massachusetts in 2021. They are followed by Scanlon Associates (878 thermostats) and Covanta - SEMASS (694 thermostats). It is important to note that Wheelabrator and Scanlon Associates are accounts that encompasses many local contractors directly participating in TRC's program, specifics are available in the appendix – 2021 Collection Location Bin Receipts. Apart from these locations, 7 program partners returned more than 100 thermostats each. Figure 14 displays the top performers in terms of total thermostats returned in 2021.

Figure 15 includes the top performers for 2021 by each of the following categories: total bins returned, total thermostats returned, and average number of thermostats per bin.

TRC conducted several activities in 2021 to increase the number of bins and thermostats returned in Massachusetts. These activities included site visits and 'miss you' calls to collection locations that may not have returned a bin recently. In 2021, 25 site visits were conducted in Massachusetts, and a total of 142 'miss you' calls were placed. Figure 16 displays the relationship between the number of site visits per month, the bins returned per month, and the number of thermostats (in 100's) returned per month. In 2021, there was a positive correlation between activities performed and the number of thermostats returned.

SECTION 3: Comparisons to National and Other States' Data

To compare how the Massachusetts collection partners performed in 2021, the national average for the number of bins returned per location that returned at least one bin was calculated and compared to the Massachusetts average since 2012. The average number of bins does not include locations that did not return any bins in that year. It should be noted that when making comparisons each state has different regulations, a different mix of housing types, local policies, and incentives that may have a unique impact on returns. Recently, the average number of bins returned per location per year was higher in Massachusetts than the U.S. average, as shown in Figure 19.

Figure 22 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2021, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). In 2021, 27% of the locations in Massachusetts returned at least one bin compared to a national average of 16%. The highest percentage of locations returning a bin in 2021 among states that mandate thermostat returns reporting was Rhode Island (74%).

Figure 23 compares the Massachusetts and national rates for several analytics. These include: total whole thermostats, bins, and loose switches collected, number of thermostats collected by total locations and per actively participating locations, number of thermostats per bin returned on average, equivalent average, and number of mercury thermostat equivalents returned in 2021. The equivalent average is an average of the number of switches in whole thermostats collected in Massachusetts, and it is used to represent an equivalent number of thermostats from returned loose switches. The thermostat equivalent number includes the total of whole thermostats returned plus the number of thermostats estimated from loose switches. Figure 24 ranks the states for each category. The states displayed are those that mandate thermostat returns reporting.

Estimate of Mercury Thermostats Remaining to be Collected

Pursuant to regulations promulgated by the Department of Environmental Protection (DEP) in April 2019, TRC is required to provide “*an estimate of how many out-of-service mercury-added thermometers (sic) have yet to be collected (in Massachusetts).*”¹

TRC contends – and has stated in many forums – that no demonstrated, empirically sound method exists for estimating the number of mercury thermostats that remain in service and enter the waste stream annually to any reasonable degree of precision. The primary reason is that these products were sold over many decades by numerous manufacturers and secondary sellers and there is no comprehensive sales data available to use as a basis for tracing their installation over time in a given state or region.

Some observers have claimed that population size can serve as a predictive factor in making such estimates, but without credible sales data there is no way to build a historical correlation between the two variables. Moreover, TRC maintains that population alone tracks poorly with the number of mercury thermostats in service. There are a host of other factors that influence the prevalence of mercury thermostats in any particular region including, but not limited to, weather patterns, socio-economic conditions, building stock characteristics, state/local energy conservation policies, and so forth. Even if data on all possible predictive factors were available, the resulting estimates still would be subject to uncertainty and could not be considered determinative.

TRC’s collections in Massachusetts have mostly maintained a steady, upward trend since they first began in 2000, whereas national collections seemingly peaked in 2014 and continue to decline. There have been several ‘threshold’ years in MA wherein collections jumped to a level well above the average of the previous few years – *e.g.*, 2003, 2012, and 2018. The results no doubt reflect the full impact of legislative action a few years earlier that established mandatory mercury thermostat recycling across the Commonwealth, replacing the previous voluntary program. This greatly increased the number of collection bins in operation, which nearly doubled from 2016 to 2018.

¹ 310 CMR 77.04; see <https://www.mass.gov/doc/310-cmr-77-collection-and-recycling-of-mercury-added-thermostats/download>.

In addition, the last several years also saw a rise in the number of thermostats received per bin in Massachusetts, again contrasting with national figures that reveal a 50% drop in this number from 2013-2018 (See Fig 8).

Mercury thermostat sales and installation, however, have been prohibited in the Commonwealth since passage of the Mercury Management Act of 2006. In the ensuing decade and a half, federal, state, and local energy conservation initiatives have led to widespread transition to more energy efficient HVAC systems in residential sectors throughout the US, both for new construction as well as through retrofits and upgrades. Together these factors ensure that the number of mercury thermostats still in service in Massachusetts has fallen dramatically over that period.

It is therefore likely that TRC's recent, inordinately high collection totals in Massachusetts reflect greater accessibility to the program generated by the 2014 statutory requirements. This factor may help sustain collection totals for a short period, but inevitably the numbers will fall as the remaining stock is depleted. TRC projects that annual collections will soon 'regress to the mean' in Massachusetts and fall back to their previous range, then will decline further.²

In summary, it is not possible to estimate the number of "*out-of-service mercury-added thermometers (sic) yet to be collected*" in Massachusetts. Any such figure would be no more than a guesstimate with an unknown margin of error. TRC believes its program in the Commonwealth is operating effectively and will continue as such so long as its supply chain partners remain avid participants and the DEP provides enforcement support, if needed.

² The yearly average over the life of the program is slightly less than 5000 units, while the average in the years since the passage of the 2014 statutory amendments has been approximately 9700.

2021 Collections by Brand

In Massachusetts, Thermostat Recycling Corporation (TRC) recovered the equivalent of 6,176 mercury thermostats from 5,585 whole mercury thermostats plus 575 mercury switches removed from thermostats. A total of 43.2 pounds of mercury was diverted from solid waste. *Please note the explanation of the converted thermostats or thermostat equivalents below.³ An example of the mercury ampoule is shown below.

As required by the state statute, a table of thermostat brand holders with their corresponding thermostats, the number of switches and the pounds of mercury recycled is below. It is important to note that there remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as “Non-Member Brands”.

³ A mercury thermostat contains a variable amount of mercury ampoules or “switches” attached to the subbase of the thermostat. These glass ampoules often are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoules count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiple the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

Current Collection Locations

Small Pails and Green Bins

In 2021, TRC shipped 47 small pails to collection points around the country. We also shipped 236 new green bins. In comparison, the program shipped 159 new green bins in 2020 and 25 small pails⁴. Collection locations either requested the new pail when they signed up to participate in the program or chose to switch out their bin with a pail due to decreased collections. The large green bins which have been the staple of the program continued to be replenished as they were returned for processing. Because the containers are reused and bar coded, we anticipate that the request for new containers will decrease as the program continues.

- Of the totals provided, TRC shipped zero new small pails and 4 new large bins in the state.

Collection Location Outbound Phone Calls

Our outbound phone calls have been branded internally as the “Miss You Call” process. These calls promote collection container returns and serve as a reminder to locations that have not returned any thermostats. TRC allocates these “miss you calls” to collection sites that have not returned a container in over a year. These calls serve as a friendly customer service check to see if any of the program materials need to be replenished or if missing containers need to be replaced. In total, the program called 3,113 current collection locations in 2021, compared to 4,175 in 2020. The decline in the number of calls completed is a positive sign that more locations were returning a bin without being prompted in 2021, and therefore did not require a “Miss You Call”.

- Completed 142 calls to encourage shipping the recycling container compared to 217 a year prior. A copy of the locations called can be found in the Appendix.

⁴ New bin orders coincide with accounts that open new stores, move or lose their existing containers.

Collection Location Postcards

Postcards are sent to all locations that have not returned a container in the past year. These postcards serve as a reminder to locations and assists with updating addresses in the database. In 2021, TRC mailed 15,626 postcards.

- Mailed 902 reminder postcards compared to 621 a year prior.

Collection Location Emails

TRC emailed locations three weeks after receiving a postcard to encourage them to directly ship the recycling container. These emails contain step-by-step instructions for shipping and direct contact information for missing shipping labels or further questions. In 2021, TRC emailed 5,405 locations.

- Emailed 284 collection locations three weeks after receiving the reminder postcard to ship their container.

If your container is empty, you have already contacted us, or you recently shipped it please disregard this email.

It may be time to send in your TRC recycling container!

As one of our collection partners, the Thermostat Recycling Corporation (TRC) is reaching out to keep you compliant with the laws relating to mercury thermostat collection and recycling.

According to our records, it's time for us to retrieve your green recycling bin or small pail for processing. Under universal waste processing rules, we need your container once a year or when it's full.

If you're having a tough time filling it, let us know! We'll be happy to send you free materials to promote your participation in our program.

Please follow the instructions below if you have one or more thermostats in your container.

Collection Location Site Visits

Throughout the year, 1,648 site visits were completed in numerous states. The purpose of site visits is to inform the location of the requirements of participation, what specifically the statute requires of them, shipment of the recycling container, and to answer any questions they may have. Often, valuable information is gathered during the site visit which is used to enhance TRC's outreach and update the database with current contact details. With the pandemic, TRC refrained from visiting locations in-person for a few months. For locations scheduled to receive a visit in March and April we "virtually visited" those locations via phone or meeting, rather than cancelling the visit altogether. In May 2021, TRC resumed in-person site visits for the remainder of the year.

- Visited 25 collection locations compared to 47 in 2021. A copy of the sites visited can be found in the Appendix.

HVAC Industry

The HVAC industry is arguably still the best, most productive and most engaged channel for recycling mercury containing thermostats. We consider this industry to be the manufacturers, wholesale distributors, and contractors which are intimately involved with the recovery of mercury thermostats.

TRC took the following actions:

- TRC was spotlighted in HVAC Refrigeration Daily, a print magazine distributed at the International Air-Conditioning, Heating, Refrigerating Expo.
- In the summer edition of Plumbing, Heating and Cooling Contractors (PHCC) of Massachusetts, TRC and Covanta sponsored a ¼ page ad and press release encouraging the proper recycling of mercury-containing thermostats.
- Continued the “Banish Mercury Off the Planet” (BMOP) Competition encouraging all HARDI wholesalers to compete through collections. Included direct marketing to 2,756 HARDI HVAC members.
 - The annual competition recovered 239 pounds of mercury from 70 HVAC wholesalers. More than 380 branch locations returned collection bins during the contest period.

Building/Facility Management Industry

In 2021, TRC engaged with the buildings and facility management sector, specifically targeting facility managers and building owners responsible for the operation of commercial and public buildings.

This audience includes professionals in business development and management firms, office, education, healthcare, retail, hospitality, and government facilities management. These individuals handle the development, construction, modernization and management of buildings.

- TRC was featured on an episode of the Buildings Podcast in May of 2021 titled, Are You Recycling Your Thermostats?
- Featured in Buildings Buzz eNewsletter in June

Property Management Industry

This year, TRC was able to partner with Progress Residential, one of the largest providers of single-family rental homes in the United States, with over 66,000 homes in 29 of the nation's fastest growing metro areas. The property management company is in the process of retrofitting hundreds of homes' thermostats, and we have provided free recycling containers for their use to recycle the mercury thermostats they are replacing.

Waste Related Sector and Household Hazardous Waste (HHW) Industry

The waste-related sector remains an important sector for TRC to target individuals and those residents performing DIY thermostat installations. These attempts were to gain new collection locations, form better relationships with the audience and raise overall awareness of the TRC program. As a result of these learnings, TRC took the following actions:

- Scoured google alerts for HHW events to target phone call or email outreach to encourage them to use the program. Sent 11 emails to facilities, offering a free container.

Advertising and Awareness

Website

In 2021, TRC continued to provide information regarding pandemic protocols. While most collection locations remained open, certain operations were most likely adjusted to accommodate for social distancing. Therefore, we recommended all recyclers should contact the collection location beforehand.

In the spring of 2021, TRC launched a redesigned website that enhances mobile accessibility and better navigation for website users. New features include a homepage displaying the latest news and blogs and a google map feature for users looking to recycle their mercury thermostat.

Our location results are populated by active locations who have returned a recycling bin to us within the past 14 months.

CORONAVIRUS UPDATE - Many participating locations have modified operations to protect front-line workers. Service may be suspended or curtailed. Please call in advance.

Search Engine Marketing (SEM)

Search Engine Marketing (also SEM or pay per click—PPC) is the process of buying a paid position on the search engine results page. TRC refined its strategy for SEM in 2020 and continued to work along that strategy in 2021.

While most KPIs decreased, the click-through-rate increased, complemented by a negligible increase in average cost-per-click. Along with fewer clicks, however, came fewer conversions. In 2022, SEM will be adjusted to ensure an expanded budget compared to other placements, as historically, this touchpoint has been very successful.

The main focus of TRC's SEM strategy is conversions, which are counted when someone navigates to the Find a Thermostat Collection Site page on the TRC website. In this area in 2021, there was a decline across the board in the number of conversions, the cost per conversion and the conversion rate, following an exponential increase in 2020. Extra attention will be paid to the new states introduced into the mix last year to ensure those ads are optimized for best performance.

In summary, more people were engaged with our ads in 2021 than in 2020, but those people converted less frequently compared to the previous period.

Clicks ▼ 15K ↓ 8.53K	Impressions ▼ 390K ↓ 545K	CTR ▼ 3.86% ↑ 1.34%	Avg. CPC ▼ \$2.00 ↑ \$0.01

Search Engine Optimization (SEO)

Search Engine Optimization (SEO) is the process whereby a website is optimized through original content and on-site coding tactics to increase its chances of appearing near the top of “organic searches.” An organic search is one that appears “naturally” in a search engine like Google or Bing. In other words, an organic listing is not ranked through paid search.

Organic traffic to a website typically brings visitors who stay longer, and visit more pages, on average.

Two key measures were identified as a baseline for growth. They are:

- Clicks from organic search
- Page-one organic terms

In 2021, organic search traffic yielded 9,746 clicks to the TRC website. By comparison, there were 7,460 clicks from organic search over the same time period in 2020.

2022 Program Modifications

Thermostat Recycling Corporation's 2022 Goals

TRC continues to set high-level annual goals for the organization. These goals assist in decision making and prioritization of activities. For the calendar year 2022, TRC plans to focus on:

- Continuing to fulfill state statutory requirements, agreements, and other arrangements for regulatory compliance.
- Targeting mercury thermostat collections from utility programs. Maintain the HVAC industry collections. Other key audiences vary by state and requirements.
- Focusing on education and awareness tactics geared toward homeowners and HVAC industry professionals.

Thermostat Recycling Corporation's Planned Tasks

In addition to the above goals, TRC set specific tasks which we plan to focus on. Completion of these tasks aid in the overall organization's goals.

- Attend and integrate learnings from other EPR products after the biannual Product Stewardship meetings.
- Roll-out public releases throughout the year.
- Continue the program's operational activities such as outbound phone calls, mailing reminder postcards, and visiting sites. Use collection data trends to target these initiatives.
- Attend trade shows and conferences, when applicable. Look for speaking opportunities at attended events.
- Review Google AdWords funding and reallocate funds to other platforms where it makes sense.

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

TRC containers with waste mercury-switch thermostats are received at a fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory room. The container and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 3 weeks of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulbs collected from the containers are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampules (switches). Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to ensure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA - identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintain management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.
