

The Learning Economy

The Foundation of a Robust Health IT Ecosystem

Panel Discussion

5th EU-US eHealth Marketplace

Boston, Massachusetts, USA

October 22, 2014

Panel: Frank Cunningham, Mary Cleary, Rachelle Blake, Stathis Konstantinidis, Michelle Dougherty

Agenda

- Who we are and why we're here
- Skilled Workforce as a Foundation
 - The Health IT/eHealth Ecosystem
 - The Learning Economy of Healthcare
- Rationale for the work
- Results and validation of our work
- The CAMEI Project
- Practical Applications
- Next Steps

Answering the Challenge: EU-US Workforce Development Initiatives

- There have been many Health IT/eHealth*/ICT projects over the years
 - The projects have been disparate and have worked in disconnected silos
- The EU-US Workforce Development Workgroup, formed from the MOU, has been charged with:
 - Evaluating and harmonizing workforce development standards, methods and tools
 - Ensuring the efforts are compatible, consumable and coordinated

*These terms are interchangeable between the EU and US

The Health IT Ecosystem

- Comprised of multiple factors working in conjunction toward a common goal
- These factors include:
 - Government and Policy Makers
 - Infrastructure
 - Academia and Education Providers
 - Community
 - Marketplace and Industry
 - Healthcare Workforce
 - Patients
- All supported by a Learning Economy

The Learning Economy

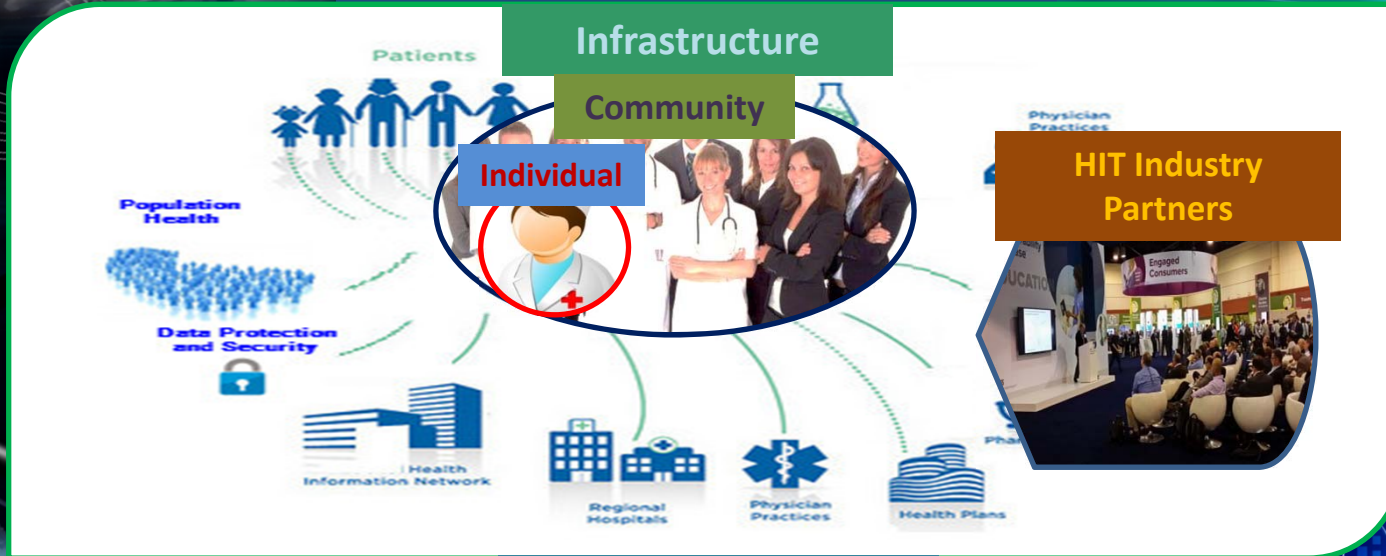

- The Learning Economy is a new, innovative concept
 - Emphasizes the benefits for employees
 - Integrates their learning and working lives in a life long journey
 - Facilitates quality of life, career success and contribution to society at large
- In the health sector, is the underpinning support for the Healthcare Ecosystem

The Health IT Ecosystem

HEALTH IT ECOSYSTEM

Learning Economy

Slide 6

CN2

"Industry" instead of "marketplace"

Include health professionals

Christina Nguyen, 10/15/2014

Main drivers for workforce development include:

- Enhancement of healthcare
 - Improved patient outcomes and safety
 - Resource and financial efficiency
- Economic benefits
 - eHealth/Health IT is a growing industry
 - Employment opportunities
- Self-actualisation of individuals in health IT workforce
 - Career development and success
 - Contribution to the **Learning Economy**

Health IT Workforce: The Challenge (cont'd)

- “Healthcare technology marketplace is thriving, but **there aren’t enough qualified IT workers** to meet the market demand”
- The North American HIT market is forecast to grow at a compound annual growth rate of 7.4 percent
 - However, **major constraints** to the growth of the healthcare IT system **include...interoperability issues and shortage of healthcare IT professionals** among others
- 67 percent of US hospitals report shortages of HIT staffing
 - System and installation cost still a major problem, but **lack of staff is now a bigger barrier** to implementing HIT/eHealth

Slide 8

CN3

Make point earlier on about how HIT influences healthcare economy. What is the value?

Christina Nguyen, 10/15/2014

Health IT Workforce: The Challenge (cont'd)

- The European Commission is compelling EU health systems to ***find innovative solutions*** through new technologies, products and organizational changes
 - This depends on a **high quality motivated health workforce** of sufficient capacity and **with the right skills** to meet the growing healthcare demands
- The ***global telemedicine market has grown from \$9.8 billion in 2010 to \$11.6 billion in 2011***
 - Is expected to continue to expand to \$27.3 billion in 2016, representing a ***compound annual growth rate of 18.6%***
- From 2013, the ***Commission will support activities aiming at increasing citizens' digital health literacy***
 - For professionals the focus will be on developing evidence-based clinical practice guidelines for telemedicine services
 - Particular emphasis on nursing and social care workers

Slide 9

CN13

Make point earlier on about how HIT influences healthcare economy. What is the value?

Christina Nguyen, 10/15/2014

EU-US: Workforce Development Goals

- Collaboratively, we are working to:
 - Increase awareness of HIT and the need for a competent and ready workforce
 - Educate future and incumbent workers to skills rather than concepts
 - Bridge gaps between the healthcare delivery, healthcare information management and health informatics communities
 - Ensure at the end of our work that our output is harmonized, valuable and usable for individuals, the HIT community, and industry partners
 - Position both Health IT/Informatics and HIT Empowered Workers for success in the workplace

Workforce Development Initiatives Members

- Some of these groups and initiatives include:

- We all came together and realized it's not just a matter of workforce development - it's about fostering, sustaining and enhancing **a whole Health Ecosystem** that ***starts with building a robust Learning Economy***

The EU-US Work – Supported by the Learning Economy

- The work of key groups and initiatives directly relates to The Learning Economy

CAMEI's Cooperation Action Plan (CAP)

Roles

About

HITCOMP: An Interactive Tool for Discovering "Health IT eSkills" in the United States and European Union

Both the United States and the European Union are currently working to encourage more effective use of information technology and communication (ICT), in delivery of health services, including disease prevention and health promotion. In order to accomplish this, as part of the Standards and Interoperability Framework (S&I Framework) of the Office of the National Coordinator of Health Information Technology (ONC-HIT), the US and EU have collaborated and formed a Workforce Development Workgroup, consisting of a Transatlantic community of educators, public and private sector industry professionals, information technology and informatics professionals, clinicians and subject matter experts in information technology and communication.

This community is working together to identify approaches to achieving competency for achieving a robust supply of highly proficient eHealth/health IT professionals and assuring health care, public health, and allied professional workforces have the eSkills needed to maximize use of their available eHealth/health information technology. Additionally, we are working to identify and address any competency and knowledge deficiencies among all staff in health care, including management, administration and support to ensure universal application of ICT solutions in health services.

The EU-US Workforce Development Workgroup's Health Comp e-mapping tool is a searchable database for developers, staffing experts and interested parties in healthcare and the healthcare information technology can use to compile information on skills and competencies needed for a variety of roles, levels and areas of knowledge. We have begun our work in the Acute Care setting, in the Direct Patient Care domain. Currently, you can sort over 250 competencies in the Direct Patient Care domain of the Clinical sector by level, quadrant (health data, clinical, communications or patient interactions), or 20 areas of competency. You can also perform a search of Direct Patient Care jobs by finding role definitions, sorting by job type and service category, matching competency levels, and displaying the equivalent role in five European languages. Finally, you can export search results to a file for your own use.

Stay tuned: More sectors, roles and searchable areas are coming soon!

<http://hitcomp.siframework.org/>

Glossary

* Term	Definition & Notes
Category	One of 20 specialized areas of competency, from access, to care coordination, to documentation, to privacy and security, to quality and safety, and others.
Division	A subset of one of the five domains, including clinical, non-clinical and others.
Domain	One of five areas of health information technology focus areas, including Direct Patient Care, Administration/Finance/Law/ Management, Engineering/Information Systems, Informatics and Research/Biomedical.
Level	One of five grades of experience and skill for HIT competence and competencies, including: <ul style="list-style-type: none"> • Baseline: A foundation level upon which all other skills and competencies are based. • Basic: An entry-level or beginning skill or competency level, equating to "understanding" and "knowing" in Bloom's Taxonomy. • Intermediate: A mid-level incumbent skill or competency level, equating to "applying" and "analyzing" in Bloom's Taxonomy. • Advanced: A high-level incumbent skill or competency level. • Expert: The highest level of skill or competency level), both equating to "evaluating" and "synthesizing" in Bloom's Taxonomy. <p>Note/Disclaimer: These levels do not correspond one-to-one to job progression or role levels and can vary by role, organization and location.</p>
Quadrant	A grouping for competency categories. A quadrant is one of four areas of interactions in HIT, including health data, clinical, communication and patient interactions. Each quadrant contains five categories of competencies.
Silo/Origin	Note/Disclaimer: Our final competencies have their basis in the silo/origin, but in many cases do not reflect the actual or original language due to our community development and consensus process.

Strategy: Combine areas of complementary strengths between EU and US to create joint open educational eHealth programmes

eHealth

Health related information and communication technology (most usually referred to as “eHealth” in Europe and “health IT” in the US) is an important and growing sector in the United States and the European Union. It is a rapidly developing and highly innovative area. It has considerable potential to promote individual and community health, foster innovation and economic growth.

The purpose of this collection is to share relevant open access educational resources that contribute to the United States and European Union common eHealth training needs. The collection aims to foster a new generation of highly proficient eHealth professionals and assure health care, public health, and allied professional workforce with the skills needed to make optimum use of their available information technology.

Global Health Workforce Development

- Sponsored by the AHIMA and IFHIMA through a grant by the US Department of Commerce
- The goal of the GHWC is:
 - to establish a global health information curricula and competency standard
 - to provide a framework for healthcare and education systems worldwide
 - to update and/or build a workforce development strategy
 - Representatives from all six WHO Regions

GHWC Members:

Division	Type	Level	Service Category	Roles	Description
Clinical	Professional	Intermediate	Physician/Provider/Medical Staff	Anesthesiologist (Doctor)	Anesthesiologists are physicians who administer anesthetics prior to, during, or after surgery or other medical procedures. Like other physicians, they evaluate and treat patients and direct the efforts of those on their staffs. They confer with other physicians and surgeons about appropriate treatments and procedures before, during, and after operations. These critical care specialists are responsible for maintenance of the patient's vital life functions—heart rate, body temperature, blood pressure, breathing—through continual monitoring and assessment during surgery. They often work outside of the operating room, providing pain relief in the intensive care unit, during labor and delivery, and for those who suffer from chronic pain.

Division	Type	Level	Service Category	Roles	Description
Clinical	Professional	Advanced	Nursing	Registered Nurse (RN)	Registered nurses (RNs) provide and coordinate patient care, educate patients and the public about various health conditions, and provide advice and emotional support to patients and their family members.
Clinical	Professional	Intermediate	Nursing	Nurse Anesthetist	Nurse anesthetists provide anesthesia and related care before, during, and after surgical, therapeutic, diagnostic, and obstetrical procedures. They also provide pain management and some emergency services. Before a procedure begins, nurse anesthetists discuss with a patient any medications the patient is taking as well as any allergies or illnesses the patient may have, so that anesthesia can be safely administered. Nurse anesthetists then give a patient general anesthesia to put the patient to sleep or regional or local anesthesia to numb an area of the body. They remain with the patient throughout a procedure to monitor vital signs and adjust the anesthesia as necessary.
Clinical	Professional	Intermediate	Nursing	Licensed Practical Nurse / Licensed Vocational Nurse	Licensed practical nurses (LPNs) and licensed vocational nurses (LVNs) provide basic nursing care. They work under the direction of registered nurses and doctors. Duties of LPNs and LVNs vary, depending on their work setting and the location in which they work. For example, they may reinforce teaching done by registered nurses regarding how family members should care for a relative; help to deliver, care for, and feed infants; collect samples for testing and do routine laboratory tests; or feed patients who need help eating. LPNs and LVNs may be limited to doing certain tasks, depending on their location. An LPN may provide certain forms of care only with instructions from a registered nurse. In some locations, experienced licensed practical and licensed vocational nurses oversee and direct other LPNs or LVNs and unlicensed medical staff.
Clinical	Professional	Advanced	Nursing	Clinical Nurse Specialist/Patient Care	The Clinical Nurse Specialist has advanced expertise in a specific knowledge and practice area of nursing. Responsibilities include clinical practice, education, research, consultation and management. A CNS provides direct patient care; teaches patients and families self care; administers medications, IV therapy, and treatments; performs assessments, plans, implements, evaluates, and documents care; serves as preceptor, team leader, and charge nurse supervising RNs, LPNs, and NAs; advocates for the patient and family with other members of the healthcare team.
Direct Patient Care	Clinical	Basic	Patient Interactions	Quality & Safety	UK: Resources Recognise the need for continuous monitoring of system safety and performance
Direct Patient Care	Clinical	Intermediate	Patient Interactions	Quality & Safety	Cvahaooa CC... Contribute to processes, environments and information flows that improve patient outcomes

Wrap Up

European
Commission

Bringing it all Together/ Next Steps

Where we would like to go...

- Ensure the work we are doing and will continue to do reflects the objectives of the EU-US eHealth/Health IT Roadmap, driven by the input of key stakeholders
- Continue to evolve and adapt our workforce development work to address the needs of all staff in healthcare delivery, management, administration and support
- Further develop our work by integrating additional settings of care and domains
- Complete a comprehensive needs analysis that examines and aligns health IT/eHealth skills with training, identifying gaps, and bridging those gaps
- Increase collaboration between stakeholders on both sides of the Atlantic
- Develop common eHealth competence and professionalism standards to enable further collaboration on our processes, methodologies and tools
- Continue to foster growth of a robust eHealth/Health IT workforce through skills development and lifelong learning
